ABOUT THE PROJECT

A children's chemo clinic is a scary idea. The team devoted their efforts to make the space safe and comforting. Look for positive distraction for young patients, multi-tasking as a spotless environment for physicians. Drywall couldn't handle the job, but DIRTT could. Brightly-colored laminated glass lifts spirits, and the Walls support TVs, integrated medical equipment and accessories like sharps bins and glove boxes for a clean and safe space. The always-custom DIRTT Millwork brings everything up off the floor, including shelving and storage for videogames. The installation took only two weeks.
